

**IN THE ABSTRACT:**

Please enter the attached substitute Abstract of the Disclosure for that originally filed with this application.

**ABSTRACT OF THE DISCLOSURE**

A desk lamp with a function of generating negative ions including a lamp body and a negative ion generator. The lamp body has a lamp base, a lamp arm and a lampshade. The negative ion generator is located on an internal wall inside the lamp body and has an air outlet plane directed toward a light region defined by the lampshade. The negative ion generator is installed in an appropriate position inside the lamp body, such as the lamp base, the lamp arm or the lampshade, so that negative ions from the negative ion generator will be exhausted outside the lamp body.
